

## Megaband REP Left Reducer

### Description

Metal accessory for creating a left offset reduction in the wiring installation with the Megaband® REP ladder. It allows changes in width and height of different sections to be made very easily using a single piece. Made from steel with GC Protection system

### Advantages

It allows the creation of width changes to adapt to the demands of each electrical installation.

Available in 70, 100 and 120 height and 100 to 600 mm wide

Specially designed for the petrochemical sector, with REPSOL approvals, ED-P-11-02

Conforms to IEC 61537 and CE Conformity to Directive 2014/35/EU.

GC Protection System. Hot dip Galvanised with 85 microns of thickness. Class 8 according to IEC 61537.

### Applications

Suitable for creating width and height reductions in Megaband® REP ladder, in the routing, transport and distribution of cables in installations in the Petrochemical, Oil & Gas, Offshore, Civil Works and Infrastructure industries, as well as in tunnels and installation galleries.

### Solutions

| Main technical characteristics                                                                |                                                                                                     |                                                                                                |                                                                                                 |                                                                                       |                                                                                     |                                                                                                               |                                                                                          |  |  |
